

# THERMAL ANEMOMETER MODEL WINDQX.01

NO MOVING PARTS

[PATENT U202332221](#)

## Model SA01

The SA01 model is a solid-state anemometer designed for digital air velocity measurement. It does not compromise on accuracy or precision, making it an excellent choice for troubleshooting HVAC systems and conducting commissioning work. Additionally, its robust design allows for permanent installation, enabling continuous monitoring of air velocity over time.

## Features and Benefits

- + Accurate air velocity and temperature measurement
- + Easy integration
- + Hole-less measurements system
- + Omnidirectional reading
- + Calibration certificate included

## Applications

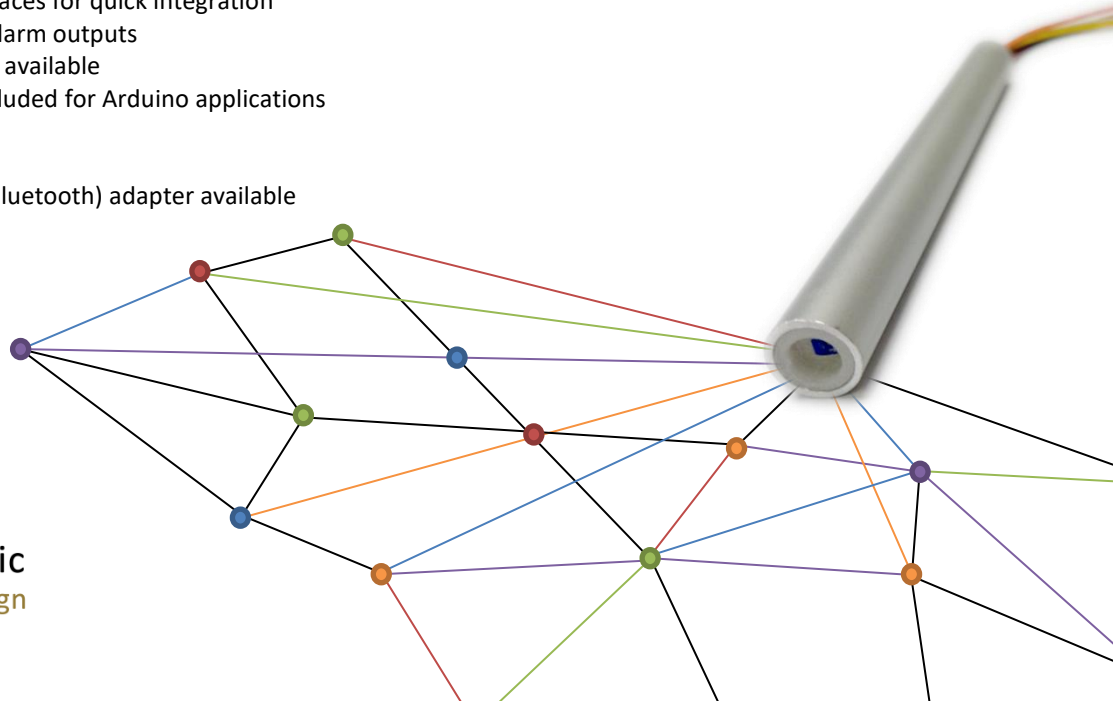

- + HVAC system performance
- + Commissioning
- + Plant maintenance
- + Critical environment verification
- + Duct traverses

## Additional Features and Benefits

- + Simultaneously measures temperature and velocity
- + Multiple connection interfaces for quick integration
- + Possibility of configuring alarm outputs
- + Multiple fixing accessories available
- + Downloading software included for Arduino applications
- + SERIAL TTL output data
- + RS485 adapter available
- + Radios (LoRa, LoRaWAN, Bluetooth) adapter available

Circuit Design

## Technical specifications

	Measuring units	Accuracy*	Measuring range	Resolution
<b>Air velocity</b>	km/h	±(3% of value + 0.2 km/h) from 0 to 20km/h ±(3% of value + 0.5 km/h) from 20 to 60km/h ±(3% of value + 1 km/h) from 60 to 130km/h	From 0 to 130km From 130 to 200km**	0.1Km/h
<b>Temperature</b>	°C	±0.5 °C	From -10 to +60 °C	0.01 °C

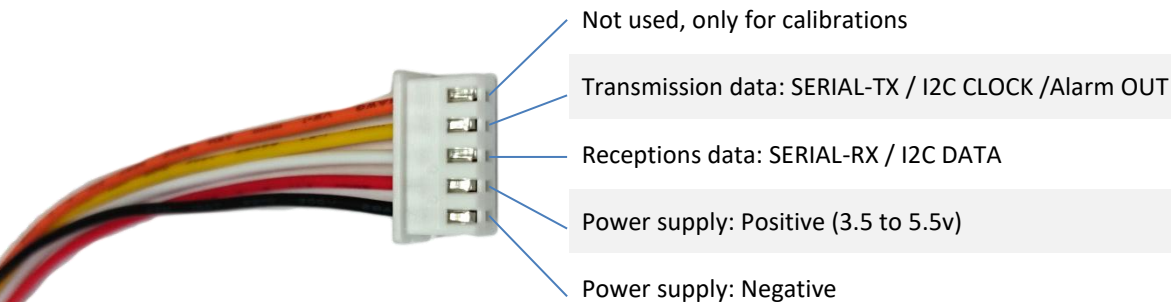

\*All the accuracies indicated in this technical datasheet were stated in laboratory conditions, and can be guaranteed for measurements carried out in the same conditions.  
\*\* interpolated through the use of a calibration curve obtained from 0 to 130 km.

## General features

<b>Measuring element</b>	Hotwire air velocity: heated PT100 sensor Ambient temperature: PT100 sensor combined with digital sensor*
<b>Housing</b>	ABS-PC and Aluminum, IP67**
<b>Power supply</b>	From 3.5 to 5.5V (perfect for 1 cell LiPo battery)
<b>Consumption</b>	Working mode: From 1 to 25mA – Average 18mA Stand-By mode: less than 1mA
<b>Communication</b>	SERIAL TTL @ 3v3 – 115200 bauds – every 1 second
<b>Dimensions</b>	Body: long 105mm, diameter 10mm / Wired: long 165mm
<b>Operating conditions</b>	From -25 to 50 °C. In non-condensing conditions.
<b>Weight</b>	12 g
<b>Time acquisition</b>	From Stand-By to Working Mode: 15sg

\* Depending on the version.  
\*\* Only for anemometer body.
